

## **SOCIAL NETWORK-BASED INTERNET SEARCH ENGINE**

### **ABSTRACT OF THE DISCLOSURE**

Filtering Internet content includes receiving a search query message comprising a search query to an Internet search engine. Data is received from the Internet search engine,  
5 responsive to the search query message. Filtering of the data produces a data subset. The filter selects data for inclusion in the data subset based upon occurrence of the data in a database. The database includes content selected for inclusion by designated users. The data subset is displayed in a browser.
